CAREER SUMMARY

I am a Hungarian software developer with 15+ years of professional experience, specializing in frontend development. While my background is in full-stack engineering, the latter half of my career has been focused on frontend technologies.

I primarily work with the Angular and React stacks, including significant experience with AngularJS to Angular migrations, and I am always eager to learn new technologies. Additionally, I have a strong specialization in automation, encompassing CI/CD processes and end-to-end testing.

WORK EXPERIENCE

Independent Contractor

2020 Jan - Present

My clients from this time period include:

- Erste
- PixVR
- Diesdas
- Charly Education
- SimplifiedCard

Lead Frontend Developer

2019 Aug - 2019 Dec

SimplifiedCard

Hired as the Frontend Lead replacement, my primary focus during my six-month tenure at SimplifiedCard was migrating their platform from AngularJS to Angular 2+. I also contributed to rewriting their existing mobile app in NativeScript.

Technologies used:

AngularAngularJSNgRxTypescriptWebpackHTML/SASSMaterialNativeScriptCircleCI

Software Engineer

2019 May - 2019 July

Cloudera

While my tenure at Cloudera was brief and did not result in a long-term fit, I consider it a valuable learning experience.

Joining shortly after the Hortonworks merger, I ultimately found the company culture incompatible and departed at the end of my probation period.

Despite the short duration, I had the opportunity to work within an exceptional engineering team. This experience provided valuable insights into cloud computing and machine learning through exposure to Cloudera's ML platform.

I also gained significant understanding of effective project and team management practices.

Technologies used:

AngularJsReactReduxNode.jsHTML/SASSJestPuppeteerKubernetesWebRTCPythonJenkins

Senior Frontend Developer

2019 Febr - 2019 March

IT Ware

At IT Ware, I undertook a short-term project to develop the user interface for their new machine learning product.

The project was built using the Angular stack, their standard technology.

My responsibilities also included configuring and maintaining their Gitlab CI tool.

Technologies used:

AngularNgRxng-swaggerwebpackTypeScriptHTML/SASSDockerGitLab CI/CD

Senior Frontend Developer

2018 May - 2019 Jan

Hearsay Systems

At Hearsay I was creating custom UI solutions for the company's clients, when they had unique requests, that the existing CMS could not handle. I was also part of the planning phase of moving from a monolithic architecture to a microservice based one.

What I most liked about this position though, was the chance to do a lot of things properly that developers don't always get the chance to do. There was a lot of emphasis on accessibility, optimization, and automated testing.

Technologies used:

ReactJavascriptwebpackHTML/SASSPythonNode.jsTravisCIAWSJestPuppeteer

Software Developer

2016 Jul - 2017 Dec

T.E.L.L. Software

During my time at T.E.L.L. I transitioned from being full stack to focusing on the frontend. I worked on the mobile, desktop, and web application of a security device.

The application was JS based which and was then bundled for desktop platforms with nw.JS and mobile platforms with PhoneGap (later we migrated to Angular 2+ and Ionic).

While working here I also got more familiar with automated testing, and extreme programming practices.

Technologies used:

AngularJSJavascriptHTML/SASSNode.jsnw.JSPhoneGapIonicsocket.ioKarmaJasmineRxJS

Web Developer

2010 Dec - 2016 Jun

MadTatu

MadTatu marked the beginning of my developer career, where I progressed from a junior to mid-level developer over five years. During this time, I gained experience with a diverse range of technologies across both frontend and backend development.

My key project involved planning and implementing a new online education platform and integrating it with the e-commerce platform for a US-based fitness company.

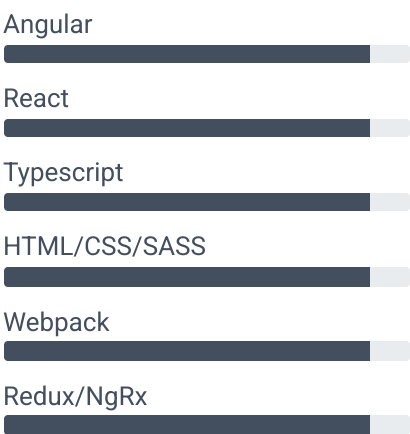

Another notable project was extending a legacy hotel booking and reservation management software, where I also took on mentoring responsibilities.
